About the Cyber Security Research Center

Directed by Dr. Bhavani Thuraisingham, Professor of Computer Science, UTDallas' Cyber Security Research Center was designated as the NSA/DHS Center for Excellence in Education in 2004, and became one of the first group of 18 universities to be designated a NSA/DHS Center for Excellence in Research in 2008.

The center, consisting of four professors, conducts cutting edge research in a number of topics including cross-domain information sharing, data security and privacy, data mining for malware detection, geospatial information security and secure social networks.

The center also releases open course software tools for the research and development communities.

Over the past 5 years, the center has generated over \$10 million in research funding from AFOSR, NSF, IARPA, NGA, NASA, ONR, and NIH and has formed close collaborations with DFW corporations including Raytheon.
